ALLIED INTERIOR SOLUTIONS

*The industry choice for multifamily cabinets and countertops*

## WHO WE ARE

Allied Interior Solutions is the industry choice for multifamily cabinets and countertops. From design to completion, we are dedicated to providing superior service, support and turnkey solutions.

Located in Desoto, Texas, all AIS cabinet products are 100% manufactured in the U.S.A. using state-of-the art and real-time cloud-based equipment. This provides the highest efficiency to complete your order with shorter lead times.

## WHAT WE DO

Allied Interior Solutions is dedicated to providing exceptional products. We offer personalized services to our clients for all multifamily cabinets, countertops, sinks and decorative hardware. A project manager is assigned to every project, making sure projects go smoothly from contracts to ensuring that the client receives the shop drawings.

Our project managers also assist the design departments, ensuring timely resubmittals and will work with clients through the entire manufacturing process. PMs are with you during every step of the process; ensuring all documents are submitted and the project has a successful conclusion.

## WHAT MAKES US DIFFERENT

Allied Interior Solutions is one of the first companies to supply turnkey porcelain countertops for Multifamily Units throughout the United States. We use far superior construction specifications than our competitors and quality details that are reflected in our finished product.

AIS team members have over 90 years of combined experience in the cabinets and countertops industry. We use this vast knowledge in AIS sales, design, and field teams to make a difference in every project we complete.

# AIS DIFFERENCE

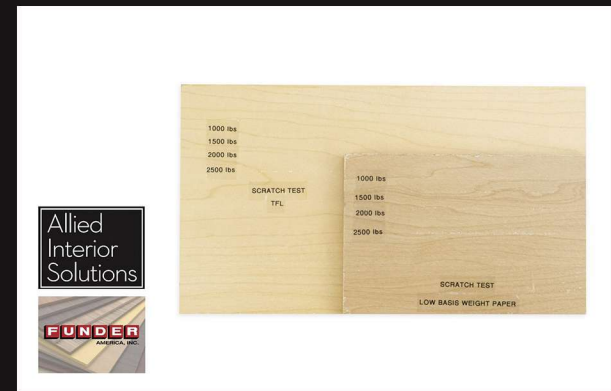

All AIS cabinet carcasses are made with Thermally Fused Laminate. Thermally Fused Laminate uses heat to fuse resin impregnated papers directly to the board's surface. Main advantages for Thermally Fused Laminate in comparison to Decorative Paper:

## Better Water Resistance

TFL manufactured by Funder America and used by Allied Interior Solutions is manufactured using heat to fuse resin impregnated papers directly to the board surface effectively sealing the substrate against water penetration. Decorative Papers offer less resistance to water as they are not directly fused to the surface of the board.

As you can see from the Boiling Water Test the TFL performs much better over a 4 Hour period of exposure. The test simulates a hot beverage spilled on the surface and left for an extended period. The TFL shows no impact while the Decorative Paper bubbles due to its inferior water resistance.

Take comfort in knowing your project has an increased level of water resistance only available by using TFL.

## Improved Scratch Resistance

Enhanced scratch resistance offered by TFL is an advantage as well. TFL can withstand the impact and wear of everyday life.

In the Scratch Test the Decorative Paper sample begins to show an impact with 1000 lbs of pressure. The TFL sample shows no impact until 2500 lbs of pressure is applied.

TFL is the clear choice when it comes to the ability to withstand sudden impacts in high traffic areas.

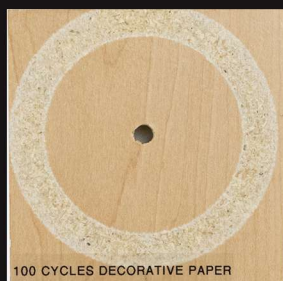

## Durability

TFL can withstand the rigors of daily life and offers an increased lifespan vs. Decorative Papers.

In the Taber Abrasion Test the superior durability of TFL is displayed.

Using S-42 sandpaper the Decorative Paper sample is worn through to the core after 100 cycles while the TFL sample is still not showing signs of the core through 200 cycles.

TFL stands the test of time and is the durable choice over a Decorative Paper alternative.
